

## Get your sheet together.

Update It provides everything you love about spreadsheets, united in one Salesforce tab, so you can spend less time entering data and more time doing... whatever else you'd like. Finally, a tool in Salesforce you and your teams will actually love using.

### Updating Made Easy

Update It is a user-friendly, responsive, grid view product built within Salesforce that gives you the power to view, filter, manage, prioritize, and update all your records from a single screen.

We make Salesforce as easy to use as a spreadsheet:

- Quickly make in-line edits to all of your records
- Drag down or CTRL+V for mass updating
- Dynamically filter your data by column
- Pivot your records by column
- Create conditional formatting rules
- Make it collaborative, editable by multiple users

*"Honestly, I don't know how I would have built this had it not been for Update It. To get this information... it would have been super manual."*

**Alex Agüero**  
Senior Director  
of Customer Success

*"It's a better way to generally manage my work because it's faster, more efficient, and makes Salesforce easier to use."*

**Kristy Bowden**  
Senior Enterprise  
Account Executive

### FAST

Built for speed, Update It lets you update, filter, manage, and prioritize records faster than any other view on Salesforce.

### FLEXIBLE

Update It works with any object in Salesforce, bringing all the data you care about into a single view. No matter if you are in Sales, Customer Service, Business Development, and or IT, Update It is your tool.

### POWERFUL

Update It embeds the power of a spreadsheet into Salesforce, so you can easily access real-time updates, never miss uploads, and eliminate time spent on data loaders.

### SIMPLE

Skip past training and implementation headaches with a familiar interface based on the spreadsheet tools you use every day.
